

YOHAN CARLOS HERNÁNDEZ SÁNCHEZ

Front-End Developer

+53 50018717

yohan12.carlos@gmail.com

E/ Calle B y C Edif 12 apto 8-A
Rpto. Orlando Jeréz Pinar del Río

TECHNICAL SKILLS

- Development with React JS
- WordPress development
- Advanced experience in GIT
Version Control
- Mastery of JS, CSS and HTML
- Knowledge of Docker and Vue
JS
- SQL, No-SQL
- Backend (Nodejs)

LANGUAGE

- Spanish (Native)
- English (Basic)

ABOUT ME

With over 10 years of software development experience, I am an educated and adaptable professional who has demonstrated success in key roles.

Specialized in React JS with 5 years of experience, my versatility is reflected in successful forays into backend and mobile development. Currently, I occupy the role of Front End and Team Leader, standing out for my ability to easily adapt to teams and environments.

My ability to work under pressure has been tested in various situations, demonstrating resilience and efficiency in problem solving.

My willingness to learn and adapt to new technologies and roles reflects my constant desire to contribute and grow in the dynamic landscape of software development.

ACADEMIC INFORMATION

University of Informatics Sciences

Computer Science Engineer

Graduation: June 1, 2013

ABILITIES

- Adaptability
- Teamwork
- Good communication
- Problem resolution
- Desire to contribute and work

PROFESIONAL EXPERIENCE

BANDEC Credit and Commerce Bank, Pinar del Río

September 2013 - March 2018

ROLE - Computer Security Specialist

I applied my knowledge of software development to successfully and efficiently fulfill that job:

- Ethical Hacking Skills.
- Design, implementation, maintenance and repair of computer networks.
- Installation and configuration of equipment such as routers, switches and modems.
- Integration of wired networks to telephone access networks and fiber optic networks.
- Installation, maintenance and administration of Windows Server 2003 to Windows Server 2008 servers and configuration of DNS and DHCP services, as well as Active Directory policy.
- Implementation and maintenance of intranet services such as Internet, chats, FTP server and others.
- Work experience with network traffic monitoring and control tools.
- Working experience with server virtualization tools, as well as their backup and recovery.
- Develop some relatively small applications to automate some secondary processes of the bank.

ICRT - Tele Pinar, Pinar del Río

April 2018 - December 2019

ROLE- Webmaster

- I worked as Webmaster of the Pinar del Río Television Channel.
- Develop the official site of the entity www.telepinar.cu in WordPress.
- I developed plugins for WordPress with HTML, CSS, JavaScript, JQuery and PHP.
- I develop an APK in Android Studio with JAVA.
- Social Media Experience.
- Digital Marketing Experience
- Web in React JS

TalenCuba - France

January 2020 - August 2020

ROLE - WordPress

- Design and implement SymplyFarm E-commerce Store.
- Custom development of customizations.
- Woocommerce module development.
- Integrations with third-party APIs

BFS Traking System, Miami-USA

September 2020 - August 2021

ROL - Front End

Project: New implementation of a Freight and Transportation Management System

I carried out the front-end part with React JS, where the system allowed for control and monitoring of the Drivers with their trucks and trailers, in charge of bringing goods to their clients.

Technologies: Java Spring Boot, React JS, AWS,

PROFESIONAL EXPERIENCE

QA-BIT - Madrid, España

September 2021 - January 2022

Role- Front End React - Wordpress - Team Leader

Project: Tarificador Autobuses

Web application with React JS that was able to allow booking bus trips in Spain.

Technologies: React JS, Node JS, Google Maps, AWS, Strapi.

Project: Local Employment and Training Agency (ALEF) of the Getafe City Council (<https://www.alefgetafe.org>)

I led the website made to measure on WordPress, with the aim of providing information about courses and job offers in Getafe, Spain.

Technologies: WordPress

Project: Qa Bit Agency Website

Develop the agency's website with WordPress and Elementor.

Technologies: WordPress, Elementor

Ublik - Quito, Ecuador

February 2022 - October 2023

ROLE- Front End React

Project: Last Mille

Web project that controls the shipping and delivery of packages in Ecuador. I integrated well into the project team playing the Front End role in React JS.

Technologies: React JS, .Net, Google Maps, AWS, OpenMapStreap.

Project: Next Track

The project was already started, as I had the pleasure of finishing the second stage of this product management system, capable of selling drinks and managing tax stamps.

Technologies: React JS, Next JS, Node JS, AWS

Project: SIADI

Course management system by meeting points in Ecuador, with attendance registration.

The first version was already in ODDO. But due to problems in its development, it was decided to move it to React and Node JS. Here I fulfilled the function as Front where in a period of two months the second phase was transferred and completed with reports. Two Web applications, Administration and Client

Technologies: React JS, Next JS, Vite, Node JS, AWS

Project: Civil Registry of Ecuador

Records and services management system for citizens of Ecuador, such as notaries, certificates, minutes, identification cards, passports, etc. In this project started from scratch, I joined the team in React JS, in which I developed some of the most complex modules of the system, such as the integration of payment gateways and appointment reservations for passports and ID cards, among others. This system consists of two Web applications, Administration and Client

Technologies: React JS, Next JS, Vite, Java Sprint Boot, Microservices, AWS

PROFESIONAL EXPERIENCE

AGL Tech Solutions LLC, Las Vegas, USA

October 2023 - Present

ROLE - Front End React y Team Leader

Project: Leisure Pay

Management system for products derived from marijuana, and intermediary for payment system.

This project I only helped with some implementations and arrangements in its final stage.

Technologies: Vue Js, .Net, AWS

Project: Resing 3X (<https://r3-x-web-app.vercel.app>)

I developed this web app in Mobile format for an event in Japan for tokens.

Technologies: React JS, Next Js

Project: Sales Matrix

Web application for the management of industries and companies that want to manage services and products with an AI Chat bot. The software is capable of creating and configuring an AI chat bot that can be embedded in any web client, to obtain product sales and service reservations.

Technologies: React JS, Next JS, WebSocket IO, AWS, Node js, Nest JS
